About Me

Passionate and motivated aspiring developer with a strong foundation in programming and a commitment to continuous learning. Excited about the opportunity to collaborate with experienced professionals, embrace new challenges, and drive innovation in the ever-evolving world of technology.

Technical Skills

- Java
- J2EE
- Hibernate with JPA
- Spring and SpringBoot
- REST API
- Data Structure
- SQL, MySQL
- HTML-CSS-Bootstrap
- JavaScript
- React JS
- Git and GitHub
- Linux

Soft Skills

- Adaptability
- Team Collaboration
- Time Management
- Problem Solving

Higher Education

- M.Tech in Mechanical Engg.
SLIET Longowal, Punjab
2021(CGPA:8.0)

Project: Web-Based Contact Manager

Objective: Designed and developed a comprehensive web-based contact management system using Java, Spring Boot, Thymeleaf, and MySQL, aimed at providing users with an efficient and user-friendly way to manage their contacts.

Key Features:

- **Contact Management:** Developed a contact management system, allowing users to add, edit, and delete contacts, along with contact information and associating images.
- **Payment Module:** Designed and implemented a secure payment module, enabling users to make online transactions.
- **Forget Password Module:** Designed and integrated a 'Forget Password' module that facilitates user account recovery through email OTP verification.

Technologies Used:

- **Programming Languages:** Java, HTML, CSS, Bootstrap, JavaScript
- **Frameworks:** Spring Boot, Thymeleaf
- **Database:** MySQL
- **Security:** Spring Security for authentication and authorization
- **Payment Integration:** A secure payment module using Razorpay.

Project: Hospital Management System

Objective: Developed a robust and user-friendly Hospital Management System to streamline and automate various administrative and clinical processes within the healthcare facility.

Key Features:

- **Patient Management:** Implemented patient registration, enabling record-keeping of personal information, medical history, contact details, and seamless appointment scheduling with specific doctors.
- **Doctor Management:** Developed a doctor portal that empowers doctors to efficiently manage appointment schedules, and record patient diagnoses while also providing access to update patient records.
- **Administrative Tools:** Managed user accounts (patients and doctors) and centralized appointment administration, including doctor assignments, scheduling, and cancellations.

Technologies Used:

- **Front-End:** JavaServer Pages (JSP) for dynamic web content.
- **Back-End:** Java and Servlets with Apache Tomcat server.
- **Database:** MySQL for data storage and retrieval.

Certifications

Java Full Stack Developer Course

Jspiders Institute, Marathahally, Bengaluru, 2023

- Gained proficiency in full-stack development, including front-end and back-end technologies, frameworks, and database management.

'Effective Business Website' Certificate by HP Life Online Course

- Mastered best-practice web development, understanding customer behavior, and leveraging website metrics for effective strategies.
